

## EVOLUTION: SCIENCE OR FAITH

The Hubble telescope is able to lock onto a target without deviating more than  $7/1000^{\text{th}}$  of an arcsecond, or about the width of a human hair seen at a distance of one mile. What are the chances that this space telescope which was designed to explore outer space came about by accident or spontaneous combustion? The odds are that the complexity of each makes it impossible. The odds are far more likely that the universe which the Hubble studies were intelligently designed as the Hubble itself. Why evolution? During the Darwin centennial celebration in Chicago (November 26, 1959), Julian Huxley declared, "In the evolutionary pattern of thought there is no longer need or room for the supernatural. The earth was not created; it evolved..." Huxley opted for a complex system of philosophy that could be explained without a supernatural cause. A person who can't believe Genesis 1:1 is a person who doesn't want to. If a person will not believe Genesis 1:1, he needs not to bother reading the remaining 31,101 verses in the Bible. Creation is not a matter for science. Science is based on observation, experimentation, and replication. There is no such thing as creation science. The origin of the universe does not fall into the category of empirical science. Call it what you want; just don't call it science. Call it philosophy, call it naturalism, but don't call it science. Belief in evolution is a faith, just like belief in the Creator is a faith.
